

QUANT SCALPER

System Manual

Risk warning

Before you begin trading on Real account please carefully consider your investment goals, risk and experience you have. It should be noted that Forex is a leverage based market. It should be remembered that leverage can work both in your advantage and disadvantage as well. Therefore there is high risk of losing a part or all of your financial input placed on your account and because of that you should remember to trade with the amount of money which you can lose without taking any influential financial damage.

- Restart your MT4

- Open any trading chart. Press the right mouse button and pick
QUANTUM SCALPER template.

- System is ready for trading

Trading Modes

System provides two different trading styles (templates) depending on your expectations, risk appetite and experience in trading.

QUANT 1

It's characterized by the faster signals as well as the largest potential profit with increased risk. If you are familiar with scalping and catching the quick market daytrading movements, you should choose this trading mode.

QUANT 2

Is the most universal mode, providing the most balanced signals.

It provides stable signals with limited risk.

This mode is recommended for beginners as well as experienced traders.

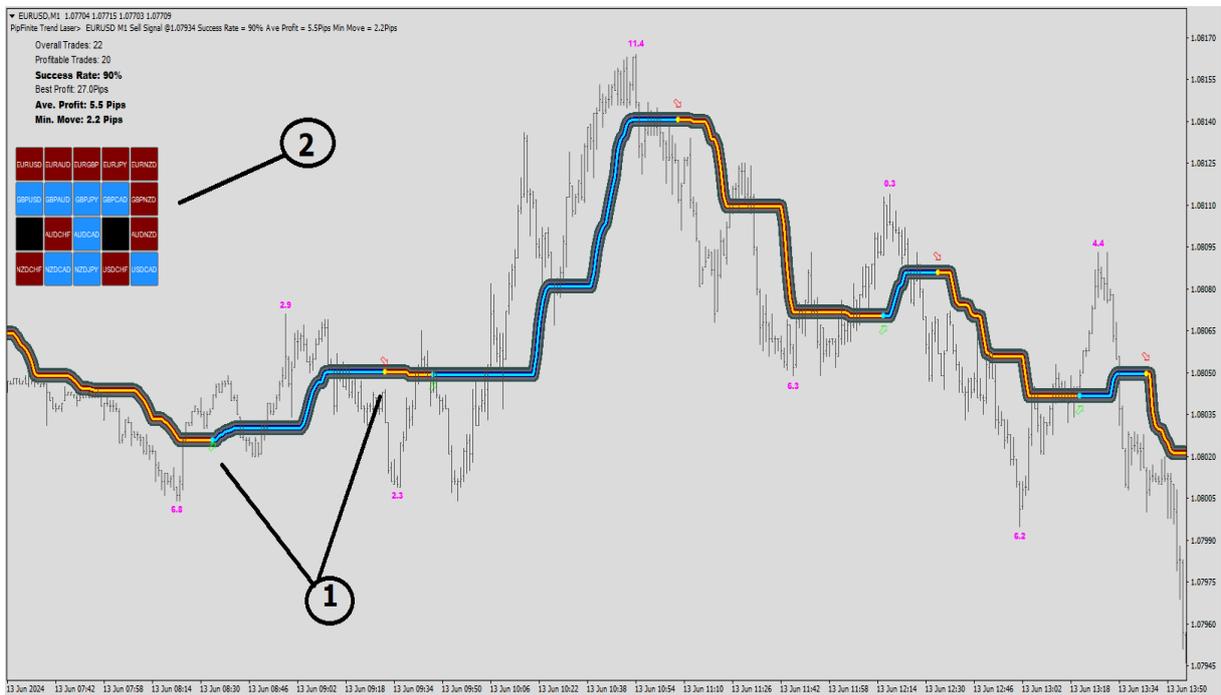

ADVANCED

You can also change the settings to your liking. When you get to the indicator settings, please find 'period' setting. The higher the value = the more conservative signals you will receive. The lower the value = the more aggressive signals will be produced.

System overview

System contains two sections.

1. Entry/Exit arrow.
2. Dashboard confirmation.

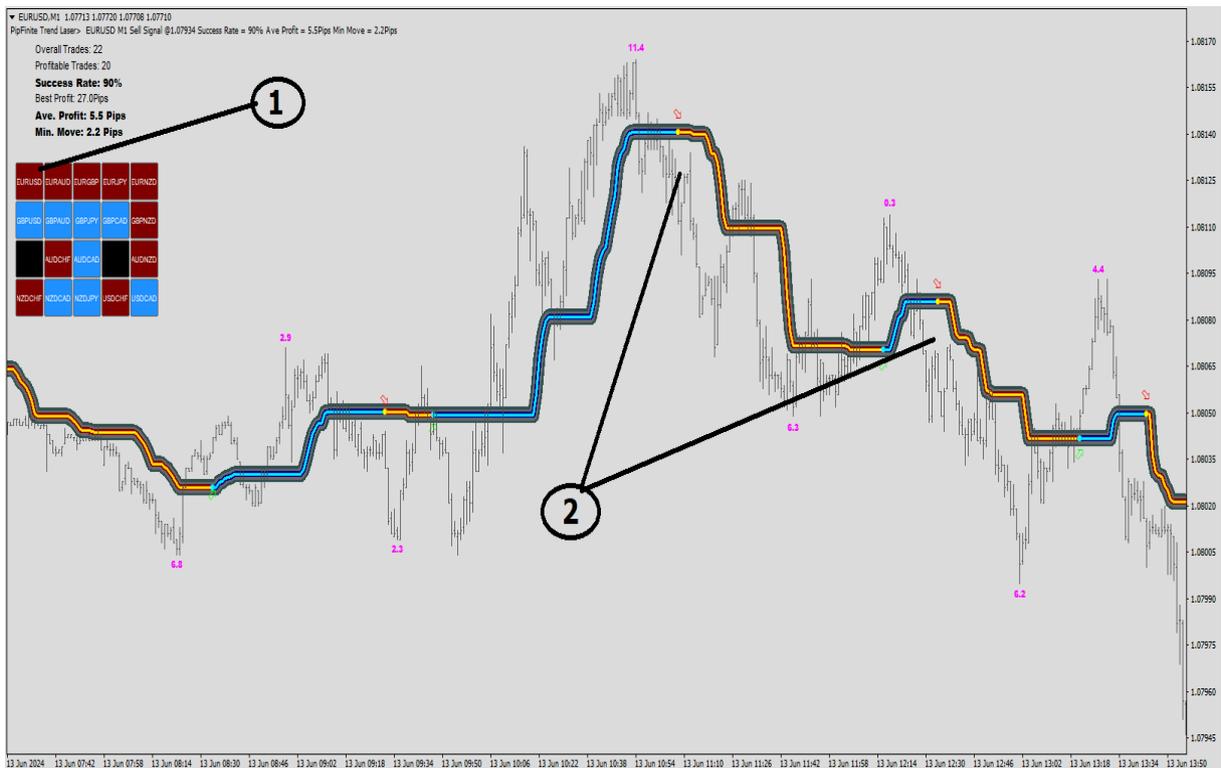

HOW DOES IT WORK.

We pick signals that are in line with the dashboard color.

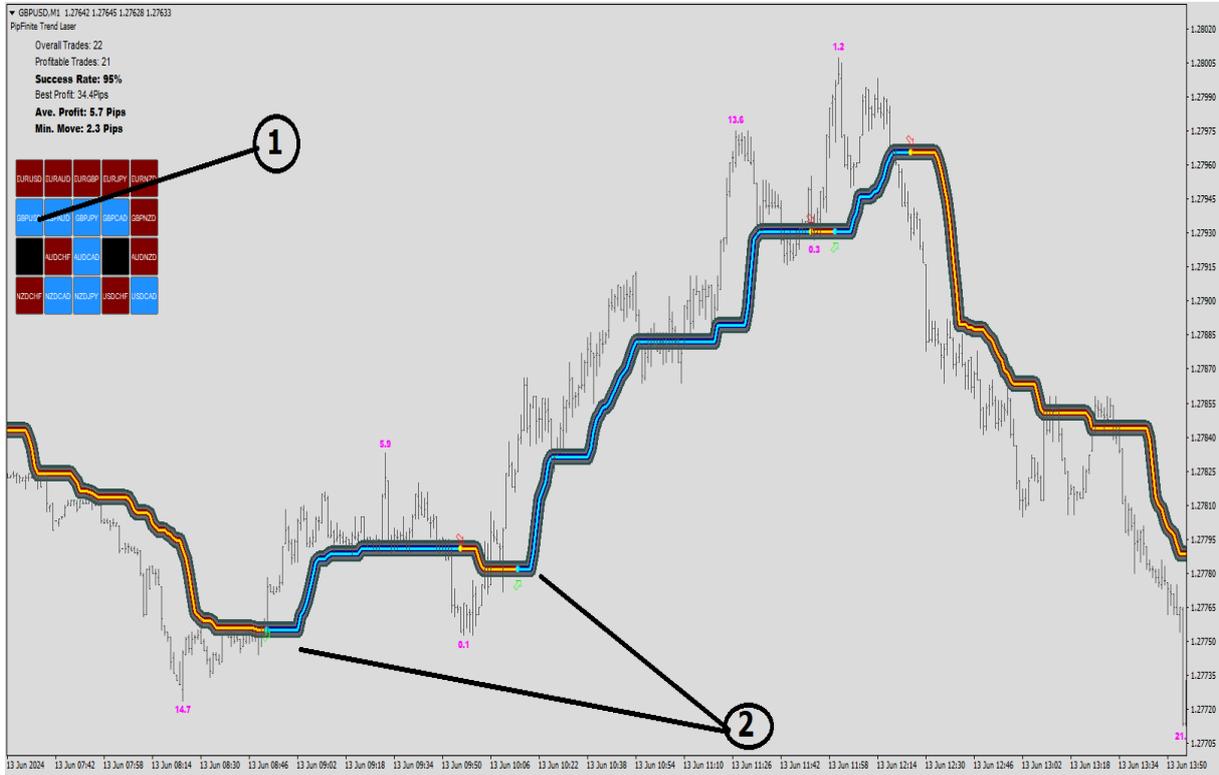

ENTRY EXAMPLE (EUR/USD Pair):

1. EURUSD is RED.
2. Focus on sell signals.

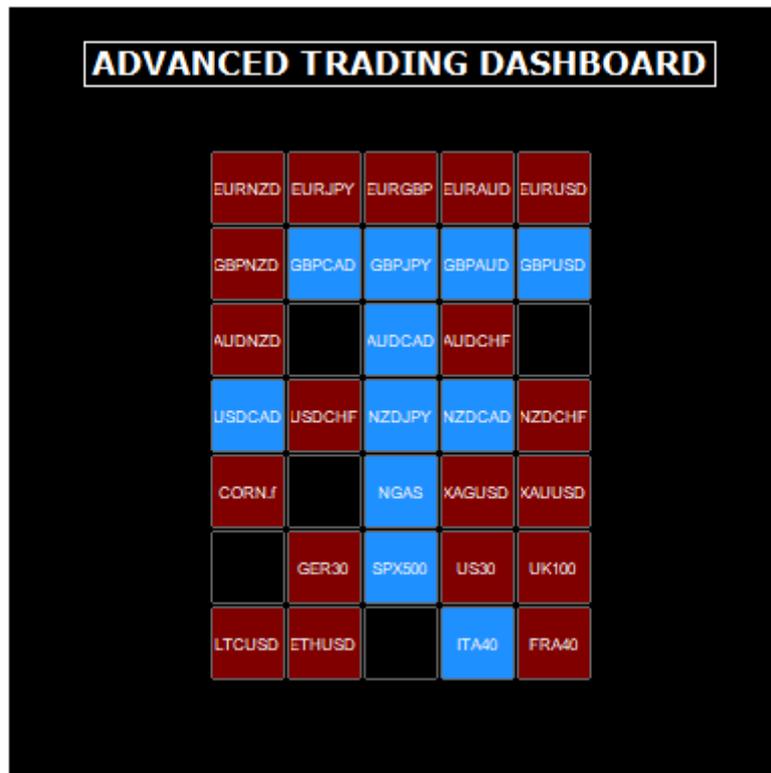

ENTRY EXAMPLE (GBP/USD Pair):

1. GBPUSD is BLUE.
2. Focus on buy signals.

DASHBOARD INDICATOR

You can change the trading instruments in the indicator settings. Just switch/add/remove the pairs with the one you like.

You can put any trading instrument available in MT4 platform (also commodities/stock/cryptos etc.)

STOP LOSS

Stop loss order should be placed in the technically best place:

- the last swing high (for the SELL trade)
- last swing low (for the BUY trade)
- at the round number
- close to important support/resistance area.

TAKE PROFIT

You can use:

- opposite signal
- risk to reward ratios (for example: if your stop loss = 15pips, set your TP at 15 or 30 pips – depending on the market volatility).

Handful of advice

- Before trading, always make sure that the market does not expect any important data. If something 'big' appears in the news calendar, it's better to wait for their announcement and later join to further movement.
- Always try to trade on major sessions when the volatility is the greatest.
- Do not overtrade. Try to Focus on quality trades (the more trades opened at the same time, the harder is to control the risk).
